

## QUICK START GUIDE

Your encoder has been set-up to broadcast to your custom streaming page.

**IMPORTANT:** Please be mindful that when you go “live” on the encoder. You are actually live on your streaming page and anyone who has access to it (students, parents, colleagues) can see and hear your conversations and video stream

### SINGLE CAMERA SET UP, WITH ENCODER

1. Mount the encoder on the camera bracket, or use a Velcro strip and attach the encoder to the tripod.
2. Connect the HDMI cable between your HD camcorder and the encoder.
3. Connect the encoder to an internet jack via a cable (Cat 5 type) or WIFI (you may need IT personnel to assist with password and firewall permission when using WiFi).
4. Connect the power source to the camera and encoder and turn both on. The encoder has an internal battery which, once charged, will last 45 minutes - 1 hour.
5. Press the "live" button on the encoder, and you're "Live" to your custom streaming site created by LiveWebView/MyLiveDistrict.

NOTE: We highly recommend you test the streaming on your site before the event. View your streaming site with a computer, tablet or smartphone (with internet connection) before the event to ensure your streaming is working and the settings are correct.
